MACHINE LEARNING

ASSIGNMENT – 1

Q1 to Q12 have only one correct answer. Choose the correct option to answer your question.

1. What is the most appropriate no. of clusters for the data points represented by the following dendrogram:

a) 2

b) 4

c) 6

d) 8

ANS :- b) 4

2. In which of the following cases will K-Means clustering fail to give good results?

1. Data points with outliers

2. Data points with different densities

3. Data points with round shapes

4. Data points with non-convex shapes

Options:

a) 1 and 2

b) 2 and 3

c) 2 and 4

d) 1, 2 and 4

ANS :- D)1,2 and 4

3. The most important part of is selecting the variables on which clustering is based.

a) interpreting and profiling clusters

b) selecting a clustering procedure

c) assessing the validity of clustering

d) formulating the clustering problem

ANS :- D)formulating the clustering problem

4. The most commonly used measure of similarity is the or its square.

a) Euclidean distance

b) city-block distance

c) Chebyshev's distance

d) Manhattan distance

ANS :- a) Euclidean distance

MACHINE LEARNING

ASSIGNMENT – 1

5. is a clustering procedure where all objects start out in one giant cluster. Clusters are formed by dividing this cluster into smaller and smaller clusters.

a) Non-hierarchical clustering

b) Divisive clustering

c) Agglomerative clustering

d) K-means clustering

ANS :- b) Divisive clustering

6. Which of the following is required by K-means clustering?

a) Defined distance metric

b) Number of clusters

c) Initial guess as to cluster centroids

d) All answers are correct

ANS :- d) All answers are correct

7. The goal of clustering is to

a) Divide the data points into groups

b) Classify the data point into different classes

c) Predict the output values of input data points

d) All of the above

ANS :-a) Divide the data points into groups

8. Clustering is a

a) Supervised learning

b) Unsupervised learning

c) Reinforcement learning

d) None

ANS :- b) Unsupervised learning

9. Which of the following clustering algorithms suffers from the problem of convergence at local optima?

a) K- Means clustering

b) Hierarchical clustering

c) Diverse clustering

d) All of the above

ANS :-d) All of the above

10. Which version of the clustering algorithm is most sensitive to outliers?

a) K-means clustering algorithm

b) K-modes clustering algorithm

c) K-medians clustering algorithm

d) None

ANS :-a) K-means clustering algorithm

11. Which of the following is a bad characteristic of a dataset for clustering analysis

a) Data points with outliers

b) Data points with different densities

c) Data points with non-convex shapes

d) All of the above

ANS :-d) All of the above

12. For clustering, we do not require

a) Labeled data

b) Unlabeled data

c) Numerical data

d) Categorical data

ANS :-a) Labeled data

Q13 to Q15 are subjective answers type questions, Answers them in their own words briefly.

13. How is cluster analysis calculated?

ANS :-The hierarchical cluster analysis follows three basic steps: 1) calculate the distances, 2) link the clusters, and 3) choose a solution by selecting the right number of clusters. First, we have to select the variables upon which we base our clusters.

14. How is cluster quality measured?

ANS :-We can measure the quality of Clustering by using the Dissimilarity/Similarity metric in most situations. But there are some other methods to measure the Qualities of Good Clustering if the clusters are alike.

1. Cluster completeness

2.Ragbag3.Small cluster preservation

15. What is cluster analysis and its types?

ANS :- Cluster analysis is a multivariate data mining technique whose goal is to groups objects based on a set of user selected characteristics. It is the basic and most important step of data mining and a common technique for statistical data analysis, and it is used in many fields such as data compression, machine learning, pattern recognition, information retrieval etc

TYPES OF CLUSTER ANALYSIS ARE AS BELOW:-

1.Hierarchical Cluster Analysis

2.Centroid-based Clustering

3.Density-based Clustering

4.Distribution-based Clustering
